Allowable Subject Matter

1. Claims 2-6, 10-11, 14-22 are allowed.

Claims 6, and 17 are independent claims.

The following is an examiner's statement of reasons for allowance:

As to claim 6, the present invention from the application discloses a method of networked printing comprises “if the print job is not formatted in the language recognizable by the printer, selectively converting a language of the print job into the language recognizable by the printer, and outputting the repaired print job to the printer”.

As to claim 17, the present invention from the application discloses an apparatus for networked printing comprises “a component operatively connected to the network and arranged to selectively convert a language of the print job to a language recognizable by the printer dependent on whether the print job is previously formatted in the language recognizable by the printer”.

The new closest prior art such as Mori et al. (US Patent No. 6,292,267) discloses the new emulation program of the printing data is changed over to the emulation program designated by the printing data when the emulation program in the printing data does not agree with the emulation program of the preceding printing job.

However, Mori et al., including an updated electronic text search, fails to anticipate or render the above underlined limitations of claims 6 and 17 obvious.

Art Unit: 2624

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Examiner's Remark

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Mori et al. (US Patent No. 6,292,267 B1) discloses the new emulation program of the printing data is changed over to the emulation program designated by the printing data when the emulation program in the printing data does not agree with the emulation program of the preceding printing job.
